

KLEI gPOWER2 AC/IEC-US power cable by PH

I was quite happy with the first KLEI™gPOWER2 AC cable I bought! When I used it to replace the previous power cable (a high quality silver cable) on my power amp, the sound of my system became a little more relaxed. I then bought the 2m KLEI™gPOWER2 AC cable (Ultra) to use between the wall socket and my power conditioner. In this position, I think it affects the whole system. Frankly, my system now sounds better than it ever has before (and it was pretty good before). Music sounds more relaxed and natural and some good recordings have that little bit of magic which makes you think you are actually at a live performance. This is especially noticeable with vocals. Before, my system could almost catch that feeling, but ultimately always felt not-quite-real: it was impressive and compelling, but just a little synthetic. Somehow, the system now feels more organic than synthetic, if that makes sense.

The chief caveat I would add to these impressions is that I also replaced the footers under my DAC with Stillpoint Ultra Minis during this period and they must also be playing part in the improvement.

The physical feel of the KLEI™gPOWER2 AC cable is also a very nice change from the incredibly stiff or springy nature of numerous other power cables I have used over the years. In practical terms, this means the KLEI™gPOWER2 AC cable is much, much easier to position and looks neat. It also doesn't pull at lighter components or weigh down on fragile connectors... PH 😊😊😊
