

KLEI™ Classic Harmony Banana by SS

The KLEI™ Classic Harmony bananas used as an Adapter

Firstly with respect to the KLEI™ Classic Harmony bananas I purchased, recently, I am very happy with them and enjoying the improved sound quality they have made to my system. I purchased them as a relatively low cost interim arrangement, prior to upgrading to one of your QPURITY speaker cables.

I currently have a set of Nordost Blue Heaven speaker cables (approx 17 years old). I purchased the Classic Harmony banana plugs for a few reasons.

- Firstly, to test their fit in my amplifier and speaker connectors (prior to getting the QPurity speaker cables) and I expected no problems and there were no fit issues or problems.
- Secondly, to try them out at the end of my current speaker cables which already have bananas attached to them. I didn't want to remove the current attached banana plugs and resolder the new Classic Harmony banana plugs (at this stage).

I have inserted the existing banana connectors, which are already attached to the Nordost Blue Heaven speaker cables, into the Classic Harmony bananas. I wasn't necessarily expecting much (if any improvement) since the addition of Classic Harmony bananas, as adapters, are an additional connection with the existing bananas.

However, I have used them for approximately 45 hours of play time and the addition of the Classic Harmony bananas, as adapters, are making a noticeable improvement to my system. That is more clarity, better balance, improved tone, slightly more depth to the sound image, more specificity to the sound image.

I look forward to hearing your QPURITY speaker cables at a later date. At this stage, I am considering the QPURITY8 model, hence my question about plans for your range (as I would possibly consider the next model up if there was one). I would be interested in reading the review(s) of the QFLOW and QPURITY SCs as they become available.

With respect to the gZero10 IC and gPOWER2 AC power cables, I have been enjoying them all very much. The reason I am considering upgrading is because I have been very impressed by the sound improvements they have made to my system. So as I can budget for them, I would like to progressively upgrade some of them, for example one of the power cables and the ICs. However, my first priority is to upgrade the speaker cables as these are currently the *weakest link*, albeit improved by the Classic harmony banana connectors... SS 😊😊😊
